PROFESSIONAL SUMMARY

Software Engineer specializing in Responsible AI (RAI) evaluation and Generative AI system assessment, with hands-on backend engineering experience building evaluation platforms that assess model trustworthiness across six core RAI dimensions. Skilled in LLM evaluation, RAG, prompt engineering, Vision Language Models, Inspect AI, TrustGen, and Azure OpenAI, with a strong foundation in Python and machine learning. Recognized for turning systematic result analysis into targeted platform improvements.

EXPERIENCE

HCLTech **Sep 2025 – Present**
Senior Software Engineer *Noida, India*

- Engineered and maintained a Responsible AI (RAI) Evaluation platform across 2–3 backend evaluation projects,covering evaluation workflows, UI functionality, backend services, API communication, and testing.
- Designed core backend processing workflows for AI assessments and established frontend-backend integration for reliable data exchange and result generation.
- Achieved 84% accuracy during the initial evaluation phase; reviewed results, identified improvement areas, and introduced targeted modifications that increased evaluation accuracy to 90%.
- Applied evaluation methodologies and metrics across 6+ RAI dimensions — safety, fairness, robustness, hallucination, privacy, and faithfulness — to systematically assess generative AI systems.
- Investigated Vision Language Models (VLMs) and the Inspect AI framework, benchmarking against 4–5 datasets to evaluate multimodal capabilities and automate Responsible AI testing.
- Evaluated the TrustGen research paper's framework across those same six RAI dimensions, applying its methodologies to the internal platform.
- Troubleshot and resolved multiple frontend-backend integration issues through systematic testing, strengthening system stability, maintainability, and overall functionality.

C-DAC **Jan 2025 – Feb 2025**
Software Engineer Intern *Noida, India*

- Developed and implemented LSTM-based models integrated with Wavelet Convolution (WXConv) for real-time data processing using TensorFlow/Keras, improving prediction accuracy by 30%.
- Optimized 5+ real-time systems using LSTM from TensorFlow and WXConv techniques, achieving 20% faster processing speeds and reducing model inference time by 40%.

KHERA INSTRUMENTS PVT LTD **Sept 2024 – Nov 2024**
Web Developer Intern *New Delhi, India*

- Managed and updated web content weekly, ensuring a 100% alignment with branding and business objectives to enhance the company's online presence.
- Increased website responsiveness and search engine visibility, resulting in a 25% boost in user engagement and lead generation.

TECHNICAL SKILLS

Programming: Python, Java, C, SQL, HTML, CSS
Generative AI AI Evaluation: Generative AI, Responsible AI, LLM Evaluation, Vision Language Models (VLMs), RAG, Prompt Engineering, Evaluation Metrics, Bias Fairness Testing, Model Robustness, Hallucination Detection, Data Privacy, Output Faithfulness
Frameworks Libraries: Inspect AI, TensorFlow, Keras, PyTorch, OpenCV, NLTK, Pandas, Gradio, Streamlit
Cloud Development: Azure OpenAI, REST APIs, Backend Development, Frontend-Backend Integration
Tools: Git, GitHub, VS Code, Eclipse, Google Colab, Jupyter Notebook

EDUCATION

JAMIA HAMDARD UNIVERSITY **Aug 2021 - May 2025**

B.Tech in Computer Science and Engineering (GPA:8.04/10)

KENDRIYA VIDYALAYA **July 2021**

PCM with Computer Science (GPA:9.2/10)

PROJECTS

AIR CANVAS | *Computer Vision,Python,ML*

- Created a highly accurate gesture-tracking algorithm, facilitating seamless and fluid drawing capabilities with minimal latency, even during rapid hand movements.
- Attained a consistent frame rate of 30 FPS, ensuring real-time interaction by leveraging advanced computer vision techniques for efficient video frame processing.

PNEUMONIA DETECTION | *Tenserflow,keras,CNN,Deep Learning*

- Developed an advanced deep learning model leveraging Keras and TensorFlow specifically for the detection of pneumonia from X-ray images, utilizing cutting-edge CNN architectures to enhance diagnostic accuracy and improve clinical decision-making.
- Attained a remarkable 81% training accuracy after only 10 epochs, highlighting the model's exceptional learning efficiency and robustness in identifying pneumonia from medical images with high precision.

HEART DISEASE PREDICTION | *Logistic Regression,Machine Learning,Streamlit*

- Trained a robust predictive model utilizing logistic regression, achieving a high accuracy of 80% in predicting heart disease risk based on healthcare data.
- Implemented a user-friendly web app using Streamlit to showcase the heart disease prediction model.

PUBLICATIONS

- Published a research paper titled Synergetic Intelligence: A Multi-Agent Learning Framework for Sustainable Healthcare Computing" at the 4th International Conference on ICT for Digital, Smart, and Sustainable Development,held at Jamia Hamdard University (April 23-24).
- Explored innovative multi-agent learning techniques to improve sustainable healthcare computing systems, emphasizing collaborative intelligence, efficiency, and data-driven decision-making in healthcare environments.
